Who are we?

Tech-Recycle was started by a group of IT industry professionals to help companies securely and ethically recycle their IT equipment by redeploying to organisations that otherwise don't have the budget.

With a long established background in the IT industry we are ideally suited to understand your requirements and offer a safe, professional and ethical route to recycling your redundant IT equipment.

What do we do?

Put simply, Tech Recycle collect redundant and end of life IT and Comms equipment from companies of all sizes, then refurbish the equipment and redeploy the equipment to companies, charities and start-ups that don't have the budget to buy new equipment. **This service is completely free.**

We destroy all data passed to us safely and securely. The destruction process meets or exceeds many internationally recognised standards including the **UK's Communications–Electronics Security Group's (CESG's) HMG Infosec Standard No. 5** and **US Army AR380-19 DoD 5220.22 M.**

Any equipment we are unable to refurbish is broken down and ethically recycled.

Why choose us?

- Our service is free of charge
- We are registered with the environment agency – our license number is cb/ae5508gw
- We use our own vehicles and staff to keep your equipment safe
- We do not export anything outside the UK
- We certify transfer of ownership and liability
- We provide data destruction certification
- We issue waste transfer notes

What do I need to do?

Once you have contacted us to arrange a collection, you don't need to do anything else. We will take care of all your legal obligations, all the paperwork, provide the necessary certification and transfer notes, collect the equipment at a time suitable to you and take it all away.

You can find more information including licences and permits at www.tech-recycle.com/docs.
